

Rediscover Your business with new insights

R&R Software's Business Analytics service portfolio

R&R Software's Business Analytics group delivers solutions that help organizations and businesses of all sizes discover new ways to strategize, plan, optimize business operations, and capture new market opportunities.

R&R Software utilizes Microsoft and Oracle technologies, and open source tools to deliver state of the art business analytics solutions that let customers gain insight into every aspect of their business, plan ahead, and act with confidence: anytime, anywhere, on any device.

R&R Software's services scale from business analytics strategy building, consultancy, and mentoring up to customized implementation, quality controlled with ISO 9001 project management methodologies.

Business Intelligence

Get instantaneous insights into your business performance, and drive better business outcomes using a broad set of capabilities for reporting, analysis, modeling and forecasting – all engineered to "speed of thought" performance on your device of choice.

Data Warehouse Big Data

Data warehouses have many uses: from connecting discrete „island“ systems, through enhancing customer experience to increasing operational efficiency. High-performance and optimized solutions provide in-database advanced analytics, enhanced datasets from big data, and industry-specific insights to drive increased innovation, profitability, and competitive advantage.

Enterprise Performance Management

Plan and forecast with greater precision using business planning solutions that align finance and operations. Accelerate your financial closing and reporting processes, and provide greater transparency and confidence in your numbers.

3 Services and Technology

ORACLE®

Services

R&R Software's services scale from Business Analytics strategy building, consultancy, and mentoring up to customized system implementation, quality controlled with ISO 9001 project management methodologies. R&R Software also offers support and maintenance for existing or newly developed business analytics solutions, like business intelligence, enterprise performance management and data warehouse systems: including monitoring, patch management, version updates, migrations, operating system and database platform changes.

4 Contact

R&R Software develops and delivers integrated business applications that manage, support and control enterprise processes. The one hundred percent domestically owned R&R Software, founded in 1991, has been profitable from the beginning: it has a revenue of more than 3 billion HUF a year and an expert base of more than 200 people. Independent market researchers rank it among the largest domestic business application developers. As the leader and partner of purpose-built Hungarian IT Consortiums, R&R Software involves, manages and motivates hundreds of Hungarian experts who are the best in their respective competency fields, with the goal of identifying and supplying high-impact export projects to developing countries, and ensuring their sustainability by delivering knowledge along with the technological developments.
